

### Aim:

Write a Python program to find the reverse of a string.

### **Input Format:**

- The input should be a string.

### **Output Format:**

- The output should be the reverse of a string.

### Source Code:

reverseString.py

```
def reverse_string(s):
    reversed_s=s[::-1]
    print(reversed_s)
input_string=input().strip()
reverse_string(input_string)
```

### Execution Results - All test cases have succeeded!
